

FIGS. 7(a) to 7(c) are sectional views taken along line 6-6 of FIG. 5 illustrating different states of the door glass run when the door glass vibrates.

IN THE CLAIMS:

Please amend the claims as follows:

1. (Amended) A door glass run attached to a door sash of a vehicle for sealing between said door sash and a door glass, comprising:

a door glass run body having a substantially U-shaped cross section; and

a pair of lip portions with each lip portion extending from opposite sides of an opening edge of said door glass run body toward a bottom face portion of said door glass run body and slidably contacting with said door glass;

said pair of lip portions having lengths individually set so that, even if said door glass vibrates in said door glass run body, said lip portions may not be spaced away from said door glass.

2. (Amended) A door glass run attached to a door sash of a vehicle for sealing between said door sash and a door glass, comprising:

a door glass run body having a substantially U-shaped cross section; and

a pair of lip portions with each lip portion extending from opposite sides of an opening edge of said door glass run body toward a bottom face portion of said door glass run body and slidably contacting with said door glass;

a protrusion being provided on an inner wall face of said door glass run and point contacting with said at least one of said lip portions body in an opposing

sub 300
cont relationship to a rear face of at least one of said lip portions and point contacting with said at least one of said lip portions;

sub 300
cont said protrusion having a height set so that, even if said door glass vibrates, an end portion of said at least one of the lip portions does not contact with said door glass run body.

3. (Amended) The door glass run as claimed in claim 2, wherein said protrusion is disposed at a position nearer to a base end portion of the lip portion compared to a position at which the lip portion and said door glass contact with each other.

sub 300
cont 6. (Amended) The door glass run as claimed in claim 1, wherein a concave notch portion is formed and defined by said inner wall face between a base end portion of the lip portion and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

sub 300
cont 7. (Amended) The door glass run as claimed in claim 2, wherein a concave notch portion is formed and defined by said inner wall face between a base end portion of the lip portion and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

8. (Amended) The door glass run as claimed in claim 3, wherein a concave notch portion is formed and defined by said inner wall face between a

base end portion of the lip portion and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

9. (Amended) The door glass run as claimed in claim 4, wherein a concave notch portion is formed and defined by said inner wall face between a base end portion of the lip portion and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

10. (Amended) The door glass run as claimed in claim 5, wherein a concave notch portion is formed and defined by said inner wall face between a base end portion of the lip portion and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

Please add the following claims:

--16. A door glass run attached to a door sash of a vehicle for sealing between said door sash and a door glass, comprising:

a door glass run body having a substantially U-shaped cross section; and
a pair of lip portions with each lip portion extending from opposite sides of an opening edge of said door glass run body toward a bottom face portion of said door glass run body and effective to slidably contact said door glass; and

means for preventing said lip portions being spaced away from the door glass even if the door glass vibrates in the door glass run body.
